RFID: Freeing the bottlenecks in logistics

Electronic tags are removing the inefficiency and speeding up processes with negligible label wearout.

UHF RFID

The technology is tracking movements in real time, improving inventory accuracy.

Most complex inventory operations

For the most complex inventory operations, for every shipment, wherever it is, Avery Dennison and our partners are delivering Accuracy, Visibility, and Efficiency globally.

-1.5k

Manually scanning barcodes (an entire pallet) can be read simultaneously. Multiple cases or parcels with no line-of-sight, and intelligent labels can be read with no line-of-sight.

Volume during BCFM period compared to approx. 21 days before

The technology is enabling warehouses to speed up throughput in anticipation of relentless growth.
