Excellent global performance on difficult-to-tag materials

AD Dogbone® M830 inlays from Avery Dennison are designed for global supply chain, industrial, RTI, and sports timing applications. They excel through superior performance in demanding environments and on difficult-to-tag materials, due to their good tolerance against the detuning effect of high dielectric materials.

AD Dogbone M830 inlays feature 128-bit of EPC memory and a 96-bit unique factory locked TID number. A 48-bit unique serial number is factory-encoded into the TID. The improved readability of the new IC offers reliable reading of small tags at high volume and speed which supports the global IoT deployments.

Dogbone® M830 inlays have a size of 97 x 27 mm, which is optimized for 100 mm / 3.94 inch wide converted labels, and are available in wet +, and label delivery formats.

Like all RFID products from Avery Dennison, AD Dogbone® M830 inlays are manufactured according to the industry's highest quality standards, as confirmed by the RFID Lab at Auburn University: The inspection body awarded Avery Dennison its first comprehensive and significant ARC accreditation for quality.
